 **VERIGA**<sup>®</sup>  
SINCE 1922

# GreenTRACK

Veriga, one of the largest global manufacturers of tire chains and forestry tracks has an expansive production program and has a prominent European presence in the forestry industry. Since 1922, Veriga has used only the best raw materials. They have an advanced manufacturing facility, including cutting edge heat treatment with an oil quenching process, resulting in products the user will find to be both functional and durable.

Veriga's link system comes with a 26 or 30mm pin size with an oblong design that reduces surface wear and extends service life, as well as a twist inhibiting side rail. Veriga GreenTRACK plates utilize a rolled profile, not castings, ensuring even and adequate hardness throughout the entire profile constructed from a boron alloy steel. All GreenTRACK tracks are put through a specialized heat treatment process to get an optimized ratio of hardness and toughness. Hardness for abrasion resistance and toughness ensures the material is not fragile and won't crack under higher loads.

GreenTRACKS are heat-treated until a hardness of 44-50 HRC is achieved. This ensures abrasion resistance, while at the same time the material is not too brittle to break on hard and rocky surfaces.

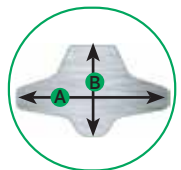

## ➤ **GreenTRACK MULTI**

Traditional single-grouser profile with an alternating spike pattern providing excellent traction and stability of the machine on various types of ground. It is appropriate for steep and rocky terrains and also for mud and snow. Self cleaning design.

### **Application**

- Demanding and rocky terrain
- Mud and snow
- Self cleaning design

**A: 84mm**  
**B: 55mm**

**Spike**  
**20mm x 50mm x 50mm**

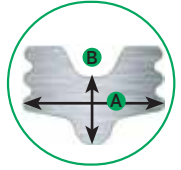

## ➤ **GreenTRACK GROOVE**

A double-grouser profile with substantial thickness that is recommended for heavier machines and comes standard with an aggressive double spike pattern.

### **Application**

- Demanding and rocky terrain
- Mud and snow

**A: 82mm**  
**B: 57mm**

**Spike**  
**30mm x 50mm x 50mm**

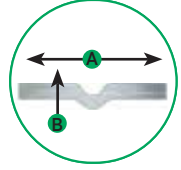

## ➤ **GreenTRACK SOFT**

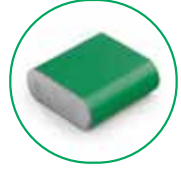

Veriga's floatation track offering for swampy and soft foundations. Similar to the Multi, the Soft comes standard with an alternating spike pattern.

### **Application**

- Soft and marshy terrain
- Ideal for situations where impact to the ground is a concern

**A: 150mm**  
**B: 30mm**

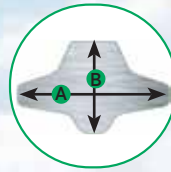

**Spike**  
**20mm x 50mm x 50mm**

## GreenW-TRACK MULTI

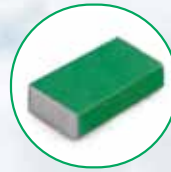

Veriga's single wheel track option for skidders are designed to protect the tires and assure maximum traction for the most challenging conditions. Each plate of the single-grouzer profile contains two spikes, making this track appropriate for steep and rocky terrain, as well as mud and snow.

### Application

- Demanding and rocky terrain
- Aggressive spike pattern for superior traction
- Alternative to traditional forestry chains
- Self cleaning

A: 84mm  
B: 55mm

Spike  
20mm x 50mm x 100mm
