

An Innovative Product

Our Promise

iGrip is a Canadian company specialized in the innovative concept of screw studs with a unique design and superior quality. iGrip's growing reputation is built on its comprehensive range of safe, easy-to-install products that are durable and adapted to various types of vehicles and climatic conditions.

Unique Design

All iGrip studs are made from hot-dipped steel to maximize durability and thermally galvanized with a zinc coating which acts as a shield against corrosion. A tungsten carbide tip is welded to each stud to amplify continuous traction. This is possible thanks to the exceptional anchoring depth our studs achieve in ice. Simple and easy to install, iGrip studs can be used for more than one season on new or used tires.

New

We're introducing a brand new range of studs in response to customer feedback: the SS stud. The structure of this new stud was designed for extreme environments and heavy machinery. The SS stud is sure to become a must-have in the mining, forestry and construction industries, for tracked and pneumatic machinery as well as vehicles weighing 100,000 pounds and more.

A new size in the ST series, the 8 mm, is now available for bicycle tires (Fat Bike) as well as ATV, motocross and Jeep tires. You can also use it on running shoes and work boots (installation manual and tools available).

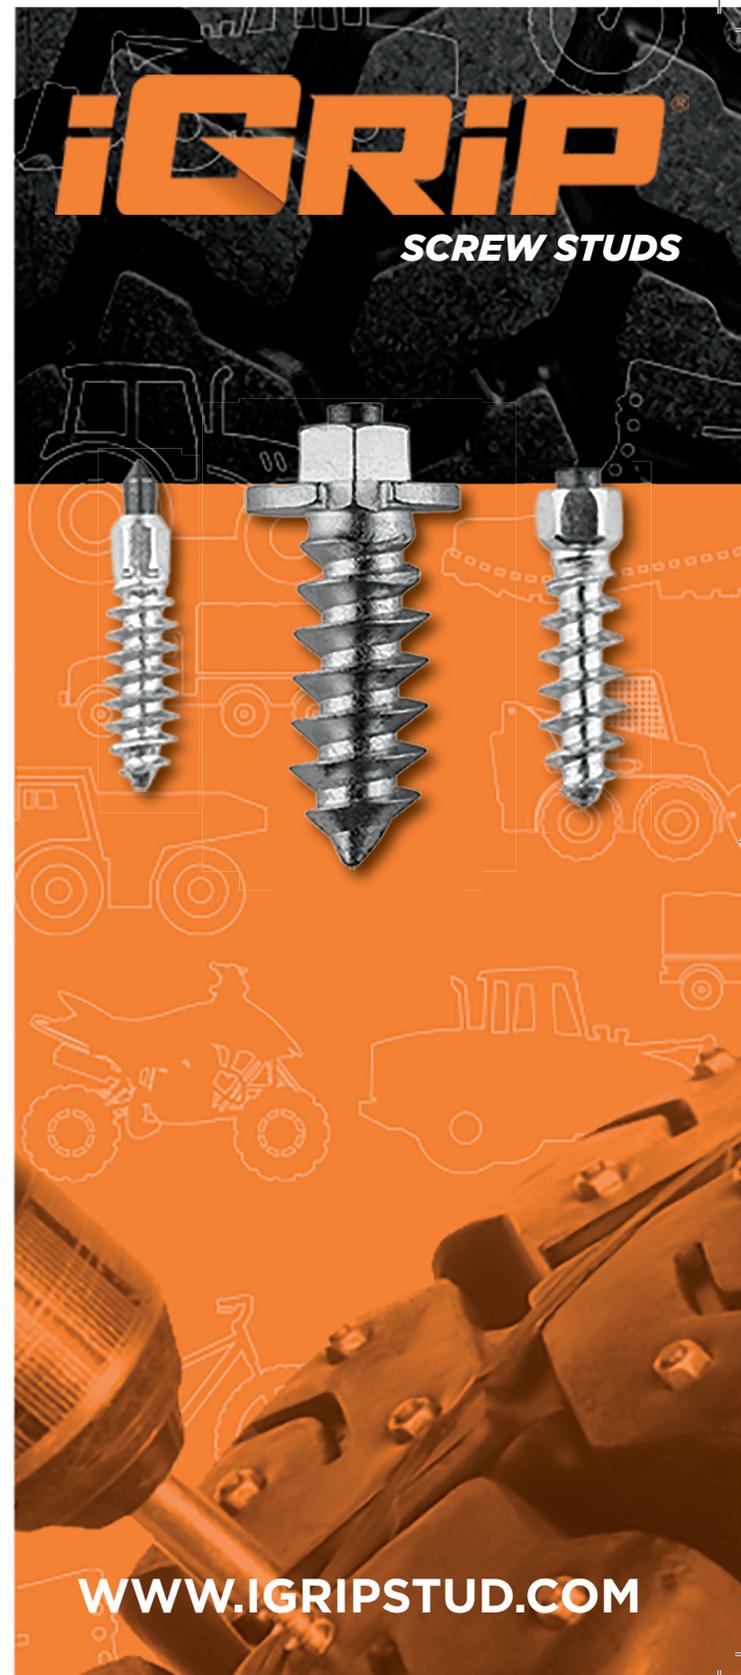

iGrip studs are now available in various package sizes, depending on your needs, with an installation tool included in each.

Installation and Warranty

The tool included with the package must be attached to a drill for stud installation and removal. A detachable measuring tool and an installation diagram are provided with each package.

We guarantee you a user-friendly, safe experience thanks to our quality warranty.
